

The Innovation Alliance is ready to kick off

Five trade shows for the entire supply chain

The total area occupied by "The Innovation Alliance" trade show is almost 130,000 m². Expectations are high for this new trade fair, which will take place from May 29 to June 1, 2018, at Fiera Milano, Italy. The event includes, for the first time, five events linked by a common thread, i.e. the supply chain logic: Plast 2018, the reference event for the plastic and rubber industry; Ipack-Ima, the leading event for processing and packaging technologies; Meat-Tech, the event specialised in meat processing and packaging; Print4All, the new format dedicated to the commercial and industrial printing industry; Intralogistica Italia, the event that combines innovative solutions and integrated systems for industrial handling, warehouse management, material

storage, and picking operations.

The Innovation Alliance focuses on an innovative cross-cutting supply chain, increasingly oriented towards new integration perspectives, even thanks to the growing popularity of Industry 4.0. At the same time, it showcases leading industrial segments, which make Italy the world's second manufacturer of industrial machinery.

The Innovation Alliance occupies 17 pavilions, essentially the entire area of the Fiera Milano exhibition district, representing the largest event ever dedicated to industrial machinery in Italy and one of the leading sector events in Europe. An insight into highly innovative markets, which together, in Italy, record a turnover of 24 billion euros and over 70,000 employees (the 2017 preliminary consolidated results are provided by the associations Acimaga, Amaplast, Anima, Argi and Ucima) and, in most cases, they have an export level close to 70%, thus offering an example of the great appreciation that Italy's industrial products have around the world. ■

More than 3,500 exhibitors, from 65 countries, attend the show ready to welcome 150,000 expected visitors, including 1,000 top buyers, coming from 66 countries. Five exhibitions running simultaneously in 17 pavilions, covering almost 130,000 m² at Fiera Milano
